

Experiment 02: Visualize User Interactions and navigation through the development of flow diagrams and wireflows.

Date:

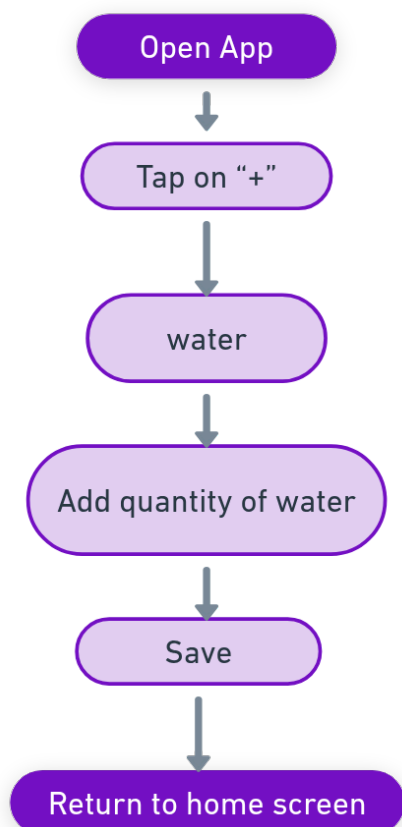

Aim: Understand and visualize how users will move through your app

Activities:

- Choose a mobile or web app idea that will be used as a central project for conducting all UI/UX design experiments across the semester.
- Map out how users will navigate the app or product.
- Identify all the tasks performed in the app. For each task,
 - Create flow diagrams to show step-by-step user journey.
- Create wireflows – combining screens and navigation arrows to show interaction.

Example:

User Flow: Log Water Intake

Wireflow :
